

## Customized cryosystems

**Cryostats (metal, glass/carbon fiber reinforced resin)**

**Cooling and liquefaction systems**

**Cryogenic actuators, sensors and pumps**

**Energy storing systems (H<sub>2</sub>, CH<sub>4</sub>, ...)**

**LNG technology**

**Sensor calibration**

**Customized electronics**

**Individual software and visualization**

**Engineering, calculation and simulation**

**Heat to Power**

**Thermal cycle and material tests ( $\lambda$ ,  $\alpha$ ,  $c$ ,  $P$ , ...)**

**Cryobiology – Life Sciences**

Certificate in accordance  
with the requirements of the  
Pressure Equipment Directive  
DGRL 97/23/EG, Modul A1  
for cryostats  
Ident-No. CE 0525

Newest development:  
Functional model of 4-Cycle-Pulse-Tube  
thermal engine; height 18 cm, width 10 cm

## Waste heat recovery systems

## Waste heat recovery systems developed at ILK Dresden

For automobiles, e.g.,

- Pulse-Tube thermal engine  $\approx 900^{\circ}\text{C}$
- MEMS \*- Stirling engine  $\approx 500^{\circ}\text{C}$
- "Evaporator" - Stirling  $\approx 350^{\circ}\text{C}$
- 2-Phase displacement engine  $\approx 250^{\circ}\text{C}$
- new project: WHR for CNG-vehicles  $\approx \text{any } ^{\circ}\text{C}$

Systems for stationary applications, e.g.,

- ORC with "linear-expander-generator" for higher temperatures,  $\approx 300^{\circ}\text{C}$

## Transformation of low grade waste heat into a high quality form of energy (e.g. electricity) via a thermo-hydraulic cycle

- Temperature range of waste heat: between  $60^{\circ}\text{C}$  and  $150^{\circ}\text{C}$
- High power range: 100 kW to 100 MW
- Low power (domestic) range: 1 kW to 10 kW

→ Usage of innovative thermo-hydraulic cycles on the basis of compressible fluids
